PRODUCT DESCRIPTION

Premium high-yield study deck engineered for quick revision and active recall. Contains concise cards covering major core concepts, visual diagrams, mathematical formulas, and memory mnemonics. Perfect for exam preparation, competitive tests, and classroom revision.

Pack Contents:

 Premium Flashcards & reference insert

Subject:

 Economics

MRP:

 ₹250.00 (incl. of all taxes)

Support:

 support@yaadcard.in

YAADCARD Publications

Made in India • Recyclable

COMP. ADVANTAGE

Basis of international trade

Countries should specialize in producing goods with the lowest opportunity cost.

Proposed by David Ricardo, 1817
Core theory of trade gains

SAY'S LAW

Supply creates its own demand

Production of goods generates income equal to the value of goods produced, creating demand.

Proposed by J.B. Say
"Supply creates its own demand"

DIM. MARGINAL UTILITY

Extra units, less satisfaction

Each additional unit consumed yields less satisfaction than the previous one.

Marshall / Gossen's First Law
Basis for downward demand curve

LAW OF SUPPLY

Price up, supply up

As price rises, quantity supplied by producers also rises, other factors held constant.

Direct price-supply relationship
Holds ceteris paribus condition

LAW OF DEMAND

Price up, demand down

As price rises, quantity demanded falls, assuming all other factors remain constant.

Proposed by Alfred Marshall
Holds ceteris paribus (all else equal)

DECK INDEX • PART 2

16: Marginalist Revolution
17: Variable Proportions
18: Cobweb Theorem
19: Heckscher-Ohlin
20: Monopolistic Competition
21: Imperfect Competition
22: Kuznets Curve
23: Solow Growth Model
24: Rostow's Stages
25: Lorenz Curve
26: Gini Coefficient
27: IS-LM Model
28: Fisher Effect
29: Public Goods Theory

YAADCARD . IN

GENERAL THEORY

Birth of macroeconomics

Argued government intervention is needed to manage employment and demand cycles.

John Maynard Keynes, 1936
Founded modern macroeconomics

INVISIBLE HAND

Markets self-regulate naturally

Self-interested individuals unintentionally benefit society through free market forces.

Adam Smith, Wealth of Nations (1776)
Foundation of laissez-faire economics

ABS. ADVANTAGE

Producing more with less

A country should produce goods it can make more efficiently than others.

Proposed by Adam Smith
Predates comparative advantage theory

LAFFER CURVE

Tax rate vs revenue link

Illustrates that both 0% and 100% tax rates yield zero government revenue.

Proposed by Arthur Laffer
Optimal tax rate maximizes revenue

PHILLIPS CURVE

Inflation vs unemployment tradeoff

Shows an inverse relationship between the rate of inflation and unemployment.

A.W. Phillips, 1958
Inverse inflation-unemployment link

MULTIPLIER EFFECT

Spending's ripple impact

An initial change in spending causes a larger overall change in national income.

Concept by J.M. Keynes
Amplifies fiscal policy impact

VARIABLE PROPORTIONS Diminishing returns law Adding more of one input while others are fixed eventually yields diminishing returns. Core neoclassical production law Also called diminishing returns law	MARGINALISM Value from marginal utility Shifted economic value theory from labor cost to marginal, subjective utility. Menger, Jevons & Walras 1870s, founded neoclassical economics	LIQUIDITY PREFERENCE Why people hold cash Theory explaining interest rates as a reward for giving up liquidity (cash). Proposed by J.M. Keynes Interest rate = price of money	QUANTITY THEORY Money supply drives prices The general price level is directly proportional to the money supply. Formula: $MV = PT$ Proposed by Irving Fisher	MALTHUSIAN THEORY Population outgrows food supply Population grows geometrically while food supply grows only arithmetically. Thomas Malthus, 1798 Predicted resource scarcity crises	GRESHAM'S LAW Bad money drives out good When two currencies circulate, the undervalued one is hoarded, not spent. Named after Thomas Gresham "Bad money drives out good"
SOLOW MODEL Capital, labor & tech growth Explains long-run economic growth via capital accumulation and technological progress. Proposed by Robert Solow Tech progress drives long-run growth	KUZNETS CURVE Inequality vs growth path Inequality first rises then falls as an economy develops, forming an inverted-U. Proposed by Simon Kuznets Inverted-U shaped relationship	IMPERFECT COMPETITION Firms have some price power A market where firms are not pure price-takers, unlike perfect competition. Joan Robinson, 1933 Coined alongside Chamberlin's work	MONOP. COMPETITION Many sellers, differentiated goods A market with many firms selling differentiated products with some price control. Edward Chamberlin, 1933 Blends monopoly & competition traits	HECKSCHER-OHLIN Factor-endowment trade theory Countries export goods that use their abundant factors of production intensively. Eli Heckscher & Bertil Ohlin Trade based on factor endowments	COBWEB THEOREM Price cycles in markets Explains cyclical price fluctuations caused by production lag in certain markets. Proposed by Nicholas Kaldor Common in agricultural markets
PUBLIC GOODS Non-excludable, non-rival goods Formalized the theory of goods that markets fail to provide efficiently, like defense. Proposed by Paul Samuelson Non-rival & non-excludable traits	FISHER EFFECT Nominal vs real interest rate Nominal interest rate reflects the real interest rate plus expected inflation. Formula: $\text{Nominal} = \text{Real} + \text{Inflation}$ Proposed by Irving Fisher	IS-LM MODEL Goods & money market link Shows the relationship between interest rates and output in goods and money markets. Developed by John Hicks IS: goods, LM: money market	GINI COEFFICIENT Single number for inequality A number from 0-1 measuring income inequality, derived from the Lorenz curve. Developed by Corrado Gini 0 = perfect equality, 1 = max	LORENZ CURVE Visualizing income inequality A graphical representation showing the distribution of income across a population. Devised by Max O. Lorenz Basis for the Gini coefficient	ROSTOW'S STAGES Five stages of growth Economies progress through five linear stages toward high mass consumption. W.W. Rostow's growth model Ends in high mass consumption
