

SCREEN-FREE LEARNING · PHYSICAL FLASHCARD VENTURE

YaadCard

Product & Business Report

Curated, customisable physical flashcards that turn dense syllabi into compact, screen-free revision tools --- built for school students, competitive-exam aspirants, and memory-intensive subjects.

1 Startup & Product

YaadCard is a physical card-product venture built around learning, memory, and light entertainment. Its core offering is a set of ready-to-use flashcards designed for school students, competitive-exam aspirants, and learners of memory-intensive subjects.

Each card distils complex information into formulas, mnemonics, definitions, facts, and visual cues — engineered for *active recall* and fast revision, without a screen in sight.

Core Innovation (as filed)

“YaadCard offers curated and customizable physical flashcards for screen-free ‘digital detox’ learning, presenting complex topics through simple, structured and easy-to-scan information, with direct-to-home delivery.”

Target Beneficiaries

- School students revising for board and unit exams
- Competitive-exam aspirants (NEET, JEE, UPSC, Commerce/Statistics streams, etc.)
- Learners of memory-intensive subjects (formulas, laws, theorists, dosages, constitutional articles)

2 Market Opportunity

Physical flashcards remain strongly associated with young children’s learning products. Specialised decks for older students and memory-heavy subjects — competitive exams, professional courses, Commerce and Statistics — are comparatively underserved. The primary go-to-market challenge is *category awareness*, not competitive intensity: fewer players actively educating the market also means less direct competition for the segments YaadCard is targeting.

2.1 TAM / SAM / SOM

The sizing below follows a simple funnel: total learners in India → a reachable 1% slice through current channels → a near-term obtainable volume of 10,000 units/year.

Layer	Basis of Calculation	Value
TAM	24.8 crore school students + 4.46 crore higher-education students = 29.26 crore learners, at Rs. 200/learner/year	Rs. 5,852 crore
SAM	1% of the 29.26 crore learner base, reachable via website, schools, coaching institutes, retailers	Rs. 58.52 crore
SOM	Initial target of 10,000 units/year at Rs. 200	Rs. 20 lakh

Worked calculations:

$$\text{Total learners} = 24.8 \text{ cr} + 4.46 \text{ cr} = 29.26 \text{ cr}$$

$$\text{TAM} = 29.26 \text{ cr} \times \text{Rs. } 200 = \text{Rs. } 5,852 \text{ crore}$$

$$\text{SAM (1\% penetration)} = 0.01 \times 29.26 \text{ cr} = 29.26 \text{ lakh customers}$$

$$\Rightarrow 29.26 \text{ lakh} \times \text{Rs. } 200 = \text{Rs. } 58.52 \text{ crore}$$

$$\text{SOM (Year-1 target)} = 10,000 \text{ units} \times \text{Rs. } 200 = \text{Rs. } 20 \text{ lakh}$$

Funnel, at a glance

29.26 cr learners (TAM) → 1% reach → 29.26 lakh (SAM) → 10,000-unit Year-1 target (SOM)

i.e. SOM is roughly 0.034% of SAM and 0.00034% of TAM — a deliberately conservative first-year obtainable slice.

3 Innovation

YaadCard's core technical differentiator is a custom AI-integrated content-generation system that produces a structured, topic-specific flashcard set in **approximately 5 minutes**, followed by a manual fact-verification pass before printing. This collapses what would otherwise be a slow, manual curation process (research → simplify → format → design) into a rapid draft-and-verify workflow, letting the venture stand up new subject decks — or fully custom decks for a school or institute — on short turnaround.

Stage	What Happens
1. Generate	AI system drafts structured content (definitions, formulas, mnemonics, facts) for a chosen topic
2. Verify	Manual fact-checking pass for accuracy
3. Produce	Cards printed on 300 GSM coloured sheets, cut, assembled, packaged
4. Deliver	Ordered via website, shipped direct-to-home (customer-paid delivery)

4 Current Product & Unit Economics

4.1 Product Specification

- High-quality 300 GSM coloured A3 sheets, cut into card shapes
- Pack contents: **30 cards + packaging**
- Currently available for order through the YaadCard website

4.2 Pricing & Cost Structure

Metric	Value (per unit)
MRP	Rs. 250
Selling Price (D2C, website)	Rs. 200
Retail / Bulk Price	Rs. 150
Current Production Cost	Rs. 75
Bulk Production Cost (target)	Rs. 60
Current Gross Contribution (D2C)	Rs. 125
Current Gross Margin (D2C)	62.5%

$$\text{Gross Contribution}_{\text{D2C}} = \text{Selling Price} - \text{Cost} = \text{Rs. } 200 - \text{Rs. } 75 = \text{Rs. } 125$$

$$\text{Gross Margin}_{\text{D2C}} = \frac{\text{Contribution}}{\text{Selling Price}} \times 100 = \frac{125}{200} \times 100 = \mathbf{62.5\%}$$

Delivery is customer-paid, so shipping cost is excluded from the margin above; marketing and other overheads are also excluded.

4.3 Margin Sensitivity

The table below shows how contribution and margin move across the current and bulk-cost scenarios, and across the D2C versus retail/bulk price points.

Scenario	Price (Rs.)	Contribution (Rs.)	Margin
D2C, current cost (Rs. 75)	200	125	62.5%
D2C, bulk cost (Rs. 60)	200	140	70.0%
Retail/Bulk, current cost (Rs. 75)	150	75	50.0%
Retail/Bulk, bulk cost (Rs. 60)	150	90	60.0%

Reading the table

Moving to bulk production cost (Rs. 60/unit) lifts D2C margin from 62.5% to 70%, and makes the retail/bulk channel --- priced lower for volume partners --- viable at a healthy 60% margin instead of 50% today. Scaling production cost efficiency is therefore the single largest lever on profitability, more so than price increases.

4.4 Year-1 (SOM) Economics

Applying the SOM target of 10,000 units/year at current unit economics:

$$\begin{aligned}
 \text{Revenue} &= 10,000 \times \text{Rs. } 200 = \text{Rs. } 20 \text{ lakh} \\
 \text{Cost of Goods} &= 10,000 \times \text{Rs. } 75 = \text{Rs. } 7.5 \text{ lakh} \\
 \text{Gross Profit} &= \text{Rs. } 20 \text{ lakh} - \text{Rs. } 7.5 \text{ lakh} = \text{Rs. } 12.5 \text{ lakh} \\
 \text{Gross Margin} &= \frac{12.5}{20} \times 100 = \mathbf{62.5\%}
 \end{aligned}$$

Year-1 Target Metric	Value
Units	10,000
Revenue	Rs. 20 lakh
Cost of Goods Sold	Rs. 7.5 lakh
Gross Profit	Rs. 12.5 lakh
Gross Margin	62.5%

Figure excludes marketing spend and other operating overheads.

5 Problem → Solution → Market Fit

5.1 Problem--Solution Fit

Problem. Students and learners struggle to retain large volumes of information and revise efficiently. Traditional notes are lengthy; digital learning tools add screen fatigue and distraction. Physical flashcards, meanwhile, are typically associated with young children, leaving older learners and memory-intensive subjects under-served.

Solution. YaadCard converts complex topics into compact, easy-to-recall physical cards — formulas, mnemonics, definitions, facts, and visual cues — supporting active recall and focused revision without a screen. The AI-integrated generation system enables rapid creation of topic-specific card sets, followed by manual verification for accuracy.

Beneficiaries. School students, competitive-exam aspirants, and learners of memory-intensive subjects.

5.2 Product--Market Fit

The product is developed, manufactured, and market-facing: a live website, a product showcase video, and an active ordering flow.

- **Technology readiness:** The AI-integrated flashcard-generation system and the physical product operate in a real, pre-commercial environment, enabling rapid creation of topic-specific products.
- **Manufacturing readiness:** Complete products have been manufactured using 300 GSM coloured sheets, with cutting, assembly, and packaging in place. Production runs at small scale today, with an established unit cost and a clear path to bulk production and cost reduction.

5.3 Business Fit & Commercialisation

YaadCard has moved beyond concept stage to a commercially structured product with a defined revenue model:

- Revenue via direct-to-customer sales at **Rs. 200 per unit**, plus planned bulk/retail sales at **Rs. 150 per unit**
- Current unit cost **Rs. 75**, with a path to **Rs. 60** through bulk production
- Lean, low-fixed-cost operating model
- Traction being built via website visibility, product-showcase content, and targeted outreach to schools, coaching institutes, stationery shops, and relevant retailers

6 Competitive Advantages / USP

Advantage	What It Means
Fast card customisation	Custom AI-integrated software creates cards on almost any topic, format, or category within minutes
Multi-format flexibility	Flashcards, game cards, collectible cards, and gifting cards all run on the same core system
Simplicity & memory focus	Clear, short definitions, correct formulas, useful mnemonics, and essential facts, designed for quick understanding and recall
Digital detox	Physical, screen-free cards as a focused alternative to digital learning and entertainment
Lean unit economics	Rs. 75/unit today, with a credible path to Rs. 60/unit at bulk scale
Scalable distribution	Direct website sales plus schools, coaching institutes, stationery, and retail channels

7 Expansion & Distribution

7.1 Category Expansion

Beyond core revision flashcards, the same production and AI-generation pipeline extends naturally to:

- Collectible cards
- Gifting cards
- Game cards

7.2 Distribution Channels

- YaadCard website (direct-to-home delivery, customer-paid shipping)
- Creative advertising / content-driven demand generation
- Schools and coaching institutes
- Stationery shops and gift retailers

8 Summary Snapshot

Metric	Value
Cards per pack	30
MRP / Selling Price / Retail Price	Rs. 250 / Rs. 200 / Rs. 150
Current cost / Bulk cost (target)	Rs. 75 / Rs. 60
Current gross margin (D2C)	62.5%
Bulk-cost gross margin (D2C)	70.0%
AI content-generation time per topic	~5 minutes
TAM / SAM / SOM	Rs. 5,852 cr / Rs. 58.52 cr / Rs. 20 lakh
Year-1 unit target	10,000 units
Year-1 gross profit (at target)	Rs. 12.5 lakh
